

# Project Development Phase

## Sprint-4

### Test case

Date	11 November 2022
Team ID	PNT2022TMID27777
Project Name	Visualizing and Predicting Heart Diseases with an Interactive Dash Board

#### Story:

A story is a type of view. A story is composed of a set of scenes that are displayed in sequence over time. Stories can be used to provide your data with a visual narrative. Stories can help you inform and engage your audience. You can use stories in IBM Cognos Analytics to create scenes that visualize your data and to tell a narrative.
